I am a software and web developer with an analytical mind and over nine years of experience in object-oriented, full-stack programming, as well as developing websites and applications from the ground up. I excel at working in a collaborative environment or pursuing solutions on my own, and I am quick to pick up new languages and technologies.

Ithaca College - Computer Science, B.A. with minor in Mathematics. May 2015

Work Experience

TherapyNotes LLC.

Philadelphia, PA (Remote)

Software Engineer / October 2022 – Present

Member of the TherapyNotes Core team, which handles patient, staff and document services.

- Involved in front-end projects using primarily Typescript and TSX. Currently in the process of migrating the entire application over to Angular JS framework.
- Taken on various degrees of ownership over smaller and larger epics, including full ownership of a project to integrate with the National Provider Identifier Registry.
- Heavily involved with initiative to break up the monolithic architecture of the application into a .NET Service Oriented Architecture structure.

Cincinnati Reds

Cincinnati, OH

Baseball Systems Developer / February 2019 – October 2022

- Project owner & full stack developer on Player Development tracking system.
 - C# WPF Desktop application with accompanying .NET 5 REST API, all developed from the ground up primarily as a one-man team.
 - I work under VP of Technology, and closely with player development department heads.
 - I handle the entire software development life cycle, and manage support requests from across the organization, ranging from affiliate coaches to C-Suite executives.
 - Major features include complete organizational roster management system, minor league development reporting tools, a fully automated game reporting system, player profiles utilizing many internal and external data sources.
- Backend developer on organizational central knowledgebase web application.
 - Large team project to overhaul the "brain" of the Reds organization.
 - Involved in the development of a microservice-based API using .NET 5 and GraphQL.
 - I produce and troubleshoot SQL Server stored procedures for accessing data.
 - I engage in code reviews with colleagues and handle quality assurance testing of features and microservices.

The Gary Stock Company – Dealer-Site.com

Brewster, NY

Senior Web Developer / March 2017 – January 2019

- Built and maintained luxury car dealership websites across the United States and Canada as a member of the Dealer-Site development team in a Laravel based system.
- Built new features into a company produced wordpress-like CMS, including enhanced embedded javascript functionality, upgraded payment systems for Porsche North America's racing site, and pricing guidelines, allowing for customization down to the specific vehicle.
- Specialized in custom inventory search results, "Americans with Disabilities Act" web compliance, large-scale buy online functionality, and third party API and tool integration.

For details of older positions I held, please visit my personal website. References available upon request.

Relevant Skills

- C# & .NET, WPF, Python, PHP, HTML/CSS/JS, Typescript, as well as experience with a wide range of frameworks utilized by those languages.
- Database Design and management specifically within Microsoft SQL Server and MySQL.
- General expertise with standard development practices and documentation tools.
- Extensive experience with API implementation (REST & GraphQL)
- Comfortable with Windows and Linux environments.
- Miscellaneous skills include version control, CI/CD, microservice-based architecture, data mining and information retrieval, Microsoft Office suite, agile development practices, command line scripting and usage.
- Capable of quickly learning new languages and frameworks on the fly.
