Software and web developer with over five years of experience in object-oriented and full-stack programming, as well as developing websites and applications from the ground up. I am available for remote positions, and contract jobs.

Ithaca College - Computer Science, B.A. with minor in Mathematics

Relevant Skills

- C#, .NET Framework, Java, Python, HTML5/CSS3/JS, PHP, as well as experience with a wide range of frameworks utilized by those languages.
- Database Design and management specifically within MySQL, and Microsoft SQL Server.
- General familiarity and expertise with standard development and documentation tools.
- Miscellaneous skills include data-mining, API implementation, version control, CI/CD.
- Comfortable with Windows and Linux environments, and capable of quickly learn new languages and frameworks on the fly.

Work Experience

Cincinnati Reds

Cincinnati, OH

Baseball Systems Developer / February 2019 – Present

- Project owner and primary developer for the new Player Development tracking system. I work under the VP of Technology, and closely with the Player Development department heads to consistently release tested features used by a userbase of over 100 Reds employees, including C-Suite executives.
- The windows native application is built in C# WPF and the API is built using .NET 5.
- Major features include complete organizational roster management system, daily reporting tools (rehab updates, player evaluations, daily field work reports, etc.), a fully automated, imported game reporting system available within minutes of game completion, and player profiles utilizing many internal and external data sources.
- I also build and maintain a fully functional REST API, which provides the application with data updates, and serves as a middleman between the application and external data sources provided through MLB, and others.

The Gary Stock Company – Dealer-Site.com

Brewster, NY

Web Developer | March 2017 – March 2018 · Senior Web Developer | March 2018 – January 2019

- Built and maintained luxury car dealership websites across the United States and Canada as a member of the Dealer-Site development team in a Laravel based system.
- Built new features into a company produced wordpress-like CMS, including enhanced embedded javascript functionality using inventory data, upgraded payment systems for Porsche North America's racing site, and pin-point accurate pricing guidelines, allowing for customization down to the specific vehicle.
- Specialized in custom inventory search results, "Americans with Disabilities Act" web compliance, large-scale buy online functionality, and third party API and tool integration.

CompuDat Systems, Inc.

New Paltz, NY

Software Engineer | February 2016 – February 2017

- Intimately involved with the MemberTrack Software development team, which provided a full suite of tools for labor unions, including handling membership fees, paying out pensions, making insurance claims, and producing expense reports.
- Designed and implemented database migration and transformation methods to reformat sets of very large client data into a standardized form using the Delphi and Python programming languages.
- Properly handled data security for sensitive information such as social security numbers, and the processing of payments.

Details of various positions I held during and after college are available on my website.
